Relevant Experience

The Evolution of Sexually Antagonistic Variation in Fruit Flies *2022-Present*

University College London *UK*

— Designed experiments implementing sex-limited selection in *Drosophila melanogaster* for experimental evolution
— Developed analytical and statistical tools using Approximate Bayesian Computation (ABC) to identify and characterize sexually antagonistic variation from genomic data

Mitochondrial-Nuclear Coevolution in Mammalian Genomes *2021-2022*

University of Nebraska-Lincoln *USA*

— Compiled datasets and computed evolutionary rate correlations between mitochondrial genes and nuclear genes with different degrees of interaction for mammalian species.
— Nuclear genes interacting with mitochondrial genes exhibit stronger correlations in evolutionary rates, supporting the hypothesis of mito-nuclear coevolution.

Molecular Compensation in the Oxidative Phosphorylation System (OXPHOS) *2019-2021*

University of Nebraska-Lincoln *USA*

— Curated and analyzed mitochondrial and nuclear protein sequences from 1200 mammalian species to identify potential compensating residues for disease-causing mutations using sequence, structural and phylogenetic analysis
— Mitochondrial genes exhibit a higher degree of compensatory evolution compared to nuclear genes, suggesting a higher degree of functional redundancy in the mitochondrial genome

Mitochondrial-Nuclear Interactions and the Thermal Sensitivity of Male Reproduction *2016-2019*

University of Nebraska-Lincoln *USA*

— Performed G×G×E×E×E phenotypic assays to characterize the effects of a mitochondrial-nuclear incompatibility between *Drosophila melanogaster* and *Drosophila simulans* hybrid on thermal male sterility.
— Mitochondrial-nuclear incompatibility exacerbates thermal sensitivity of spermatogenesis that is further modulated by environmental cues such as temperature, diet and age of exposure.

Prediction of Stable Quaternary Assemblies Protein Interaction Z Score Assessment (PIZSA) *2013-2015*

Indian Institute of Science Education and Research, Pune *India*

— Constructed knowledge-based statistical potentials trained over 4900 native three-dimensional protein structures to predict the stability of protein-protein interactions
— Extensively bench-marked across multiple test sets and is among the top 6 methods, outperforming 31 other statistical, physics, based and machine learning scoring schemes and deployed the algorithm as a web-server
