## Education

### Ph.D. in Evolutionary Biology

UNIVERSITY OF NEBRASKA-LINCOLN, USA

Advisors: Dr. Kristi Montooth & Dr. Colin Meiklejohn

Aug 2015 - Jul 2022

### Integrated B.S.-M.S. Dual Degree

INDIAN INSTITUTE OF SCIENCE EDUCATION AND RESEARCH, PUNE, INDIA

Advisor: Dr. M.S. Madhusudhan

Aug 2010 - May 2015

## Summary

I am an Evolutionary Biologist passionate about uncovering the mechanistic processes behind the diversity of life on Earth. By integrating empirical and computational approaches, I aim to achieve a holistic understanding of evolutionary dynamics. My interests center on interactions between mitochondrial and nuclear genomes and their roles in cellular function, especially in the context of mitochondrial diseases in humans. I also explore evolutionary processes shaping genetic conflicts, such as mitochondrial-nuclear incompatibilities, and the evolution of sex-specific traits. My expertise spans experimental evolution, genomics, statistical modeling, and bioinformatics. I have developed statistical methods to analyze protein-protein interaction stability and applied bioinformatics tools to dissect complex biological data. Currently, I integrate large, multimodal datasets—such as genomics and single-cell analyses—to reveal underlying biological patterns and their evolutionary significance. I am dedicated to translating these insights into a deeper understanding of human health and evolution.

## Research Experience

---

### Cell- and Tissue-specificity of Mitochondrial Disease Mutations

MRC MITOCHONDRIAL BIOLOGY UNIT · UNIVERSITY OF CAMBRIDGE

2024-Present

UK

- Analyse multimodal single-cell data to identify cell- and tissue-specific effects of mitochondrial disease mutations
- Identify nuclear modifiers of mitochondrial disease mutations using CRISPR-based screens
- Develop data processing pipelines for DamID-seq analysis

### The Evolution of Sexually Antagonistic Variation in Fruit Flies

UNIVERSITY COLLEGE LONDON

2022-Present

UK

- Designed experiments implementing sex-limited selection in *Drosophila melanogaster* for experimental evolution
- Developed analytical and statistical tools using Approximate Bayesian Computation (ABC) to identify and characterize sexually antagonistic variation from genomic data

### Mitochondrial-Nuclear Coevolution in Mammalian Genomes

UNIVERSITY OF NEBRASKA-LINCOLN

2021-2022

USA

- Compiled datasets and computed evolutionary rate correlations between mitochondrial genes and nuclear genes with different degrees of interaction for mammalian species.
- Nuclear genes interacting with mitochondrial genes exhibit stronger correlations in evolutionary rates, supporting the hypothesis of mito-nuclear coevolution.

### Molecular Compensation in the Oxidative Phosphorylation System (OXPHOS)

UNIVERSITY OF NEBRASKA-LINCOLN

2019-2021

USA

- Curated and analyzed mitochondrial and nuclear protein sequences from 1200 mammalian species to identify potential compensating residues for disease-causing mutations using sequence, structural and phylogenetic analysis
- Mitochondrial genes exhibit a higher degree of compensatory evolution compared to nuclear genes, suggesting a higher degree of functional redundancy in the mitochondrial genome

### Mitochondrial-Nuclear Interactions and the Thermal Sensitivity of Male Reproduction

UNIVERSITY OF NEBRASKA-LINCOLN

2016-2019

USA

- Performed G×G×E×E×E phenotypic assays to characterize the effects of a mitochondrial-nuclear incompatibility between *Drosophila melanogaster* and *Drosophila simulans* hybrid on thermal male sterility.
- Mitochondrial-nuclear incompatibility exacerbates thermal sensitivity of spermatogenesis that is further modulated by environmental cues such as temperature, diet and age of exposure.

### Prediction of Stable Quaternary Assemblies Protein Interaction Z Score Assessment (PIZSA)

INDIAN INSTITUTE OF SCIENCE EDUCATION AND RESEARCH, PUNE

2013-2015

India

- Constructed knowledge-based statistical potentials trained over 4900 native three-dimensional protein structures to predict the stability of protein-protein interactions
- Extensively bench-marked across multiple test sets and is among the top 6 methods, outperforming 31 other statistical, physics, based and machine learning scoring schemes and deployed the algorithm as a web-server
