## Education

### Ph.D. in Evolutionary Biology

UNIVERSITY OF NEBRASKA-LINCOLN, USA

Advisors: Dr. Kristi Montooth & Dr. Colin Meiklejohn

Aug 2015 - Jul 2022

### Integrated B.S.-M.S. Dual Degree

INDIAN INSTITUTE OF SCIENCE EDUCATION AND RESEARCH, PUNE, INDIA

Advisor: Dr. M.S. Madhusudhan

Aug 2010 - May 2015

## Summary

I am an Evolutionary Biologist passionate about understanding the mechanistic processes behind the diversity of life on Earth. My research integrates empirical and computational approaches to gain a holistic understanding of evolutionary processes. My research interests focus on the interactions between mitochondrial and nuclear genomes, and how these contribute to cellular functions, particularly in the context of mitochondrial diseases in humans. In addition, I also investigate the evolutionary processes shaping genetic conflicts such as mitochondrial-nuclear incompatibilities and the evolution of sex-specific traits. My expertise includes experimental evolution, genomics, statistical modeling, and bioinformatics. I have developed statistical methods to analyze protein-protein interaction stability and used bioinformatics tools for the analysis of complex biological data. My current work involves integrating large datasets from different modalities, such as genomics and single-cell analyses, to uncover underlying biological patterns and their evolutionary significance.

## Research Experience

---

### Cell- and Tissue-specificity of Mitochondrial Disease Mutations

MRC MITOCHONDRIAL BIOLOGY UNIT · UNIVERSITY OF CAMBRIDGE

2024-Present

UK

- Analyse multimodal single-cell data to identify cell- and tissue-specific effects of mitochondrial disease mutations
- Identify nuclear modifiers of mitochondrial disease mutations using CRISPR-based screens
- Develop data processing pipelines for DamID-seq analysis

### The Evolution of Sexually Antagonistic Variation in Fruit Flies

UNIVERSITY COLLEGE LONDON

2022-Present

UK

- Designed experiments implementing sex-limited selection in *Drosophila melanogaster* for experimental evolution
- Developed analytical and statistical tools using Approximate Bayesian Computation (ABC) to identify and characterize sexually antagonistic variation from genomic data

### Mitochondrial-Nuclear Coevolution in Mammalian Genomes

UNIVERSITY OF NEBRASKA-LINCOLN

2021-2022

USA

- Compiled datasets and computed evolutionary rate correlations between mitochondrial genes and nuclear genes with different degrees of interaction for mammalian species.
- Nuclear genes interacting with mitochondrial genes exhibit stronger correlations in evolutionary rates, supporting the hypothesis of mito-nuclear coevolution.

### Molecular Compensation in the Oxidative Phosphorylation System (OXPHOS)

UNIVERSITY OF NEBRASKA-LINCOLN

2019-2021

USA

- Curated and analyzed mitochondrial and nuclear protein sequences from 1200 mammalian species to identify potential compensating residues for disease-causing mutations using sequence, structural and phylogenetic analysis
- Mitochondrial genes exhibit a higher degree of compensatory evolution compared to nuclear genes, suggesting a higher degree of functional redundancy in the mitochondrial genome

### Mitochondrial-Nuclear Interactions and the Thermal Sensitivity of Male Reproduction

UNIVERSITY OF NEBRASKA-LINCOLN

2016-2019

USA

- Performed G×G×E×E×E phenotypic assays to characterize the effects of a mitochondrial-nuclear incompatibility between *Drosophila melanogaster* and *Drosophila simulans* hybrid on thermal male sterility.
- Mitochondrial-nuclear incompatibility exacerbates thermal sensitivity of spermatogenesis that is further modulated by environmental cues such as temperature, diet and age of exposure.

### Prediction of Stable Quaternary Assemblies Protein Interaction Z Score Assessment (PIZSA)

INDIAN INSTITUTE OF SCIENCE EDUCATION AND RESEARCH, PUNE

2013-2015

India

- Constructed knowledge-based statistical potentials trained over 4900 native three-dimensional protein structures to predict the stability of protein-protein interactions
- Extensively bench-marked across multiple test sets and is among the top 6 methods, outperforming 31 other statistical, physics, based and machine learning scoring schemes and deployed the algorithm as a web-server
